Over the last hundred years, many techniques have been developed for the solution of ordinary differential equations and partial differential equations. While quite a major portion of the techniques is only useful for academic purposes, there are some which are important in the solution of real problems arising from science and engineering. In this chapter, only very limited techniques for

Section 3 discusses some general theoretical considerations, in particular the relevant basic concepts and equations. Section 4 establishes three group of mechanical metamaterials according to the Milton map (i.e., correlation between shear modulus and bulk modulus) and the materials density.

The superposition principle, also known as superposition property, states that, for all linear systems, the net response caused by two or more stimuli is the sum of the responses that would have been caused by each stimulus individually. So that if input A produces response X and input B produces response Y then input (A + B) produces response (X + Y).. A function that satisfies the
